

Abstract:

Power Solution contains a proprietary mixture of patented adrenal and mesenchyme signaling factors.

The concentration of the ingredients in Power Solution is fine-tuned to provide the appropriate dose throughout the program. One box of Power Solution contains 24 individually sealed 7 mL vials.

Indications: *nutritional support in fatigue, adrenal fatigue, chronic fatigue, fibromyalgia and related syndromes.**

Protocol: *one vial per day on empty stomach. It should be thawed in the hand immediately before consumption.*

Patented Molecular Extraction Process:

Atrium Biotechnologies, in collaboration with its parent company Æterna Laboratories, has developed a patented biotechnological process to isolate and concentrate molecules in their natural state. This process allows for selection of desired molecules according to their size and weight. Once the desired fraction of molecules is concentrated, they are bottled under aseptic conditions. The product is flash-frozen immediately after bottling and is shipped frozen to retain its freshness, potency and bioavailability.

The end product is a 100% natural, concentrated fresh molecular compound of the highest possible bioavailability.

This patented process can be applied to different natural source materials depending on what types of molecules are desired.

Power Solution Components:

Power Solution contains two patented fresh-cell mesenchyme and adrenal extracts combined in a scientific formula.

Molecular extracts from the adrenal gland and the mesenchyme are highly bioavailable and of the highest quality available on the market today. Glandular substances are organ-specific rather than species-specific. This means that glandular substances of animal origin have enough genetic similarity to be able to assist similar cells in the human body, without antibody resistance.

Debilitating fatigue is one of the major symptoms of low or altered adrenal functions. In fact, low adrenal function was first proposed as a cause of the Chronic Fatigue Syndrome over 50 years ago. Enhancing adrenal functions is an important goal when providing nutritional support in fatigue and related syndromes.* **NatCell® Adrenals** is a liquid molecular extract from porcine adrenal tissues that may help support healthy adrenal functions in humans*.

NatCell® Mesenchyme is a liquid molecular extract from a fetal porcine source. Mesenchyme is composed of pluripotential cells, also known as mesenchymal stem cells. These cells have the ability to evolve into almost any kind of cell. During embryological development these cells form organ tissues, connective tissues, nervous system, etc. *In-vitro* experiments have proved that the molecular fraction of **NatCell® Mesenchyme** not only increases cellular proliferation but also increases cellular metabolism. Thus, the bio-available molecular extract of mesenchyme may be of nutritional support to maintain homeostasis*.
